Given: An unorganized point cloud

Given: An unorganized point cloud

Given: An unorganized point cloud

 $v(\mathbf{x}) = v(\kappa, \vec{\mathbf{n}}, d)$

- x point on the surface.
- κ and \vec{n} are geometric properties of the surface at x.
- *d* is the unsigned distance function.

5/27

T-spline

T-spline function (introduced by Sederberg et al.'03)

$$f(\mathbf{x},\tau) = \sum_{i=1}^{n} T_i(\mathbf{x}) c_i(\tau) \quad \mathbf{x} \in \Omega \subset \mathbb{R}^3$$

where τ is a time-variable.

Zero level-set

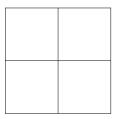

$$\Gamma(f,\tau) = \{\mathbf{x} \in \Omega | f(\mathbf{x},\tau) = 0\}$$

Evolution

Least-squares problem

$$\int_{\mathbf{x}\in\Gamma} \left(\underbrace{\operatorname{actual normal}}_{*} - \operatorname{value of speed}_{\text{function at } \mathbf{x}}\right)^2 dA \to \min$$

$$* = -\frac{\dot{f}}{|\nabla f|} = \sum_{i=1}^{n} (\ldots) \dot{c}_i$$

Discretization

$$\sum_{j=1}^{N} \left(\begin{array}{c} \text{actual normal} \\ \text{velocity at } \mathbf{x}_{j} \end{array} - \begin{array}{c} \text{value of speed} \\ \text{function at } \mathbf{x}_{j} \end{array}\right)^{2} \rightarrow \min$$

Particle $\mathbf{x}_j \in \Gamma$.

<ロ><日><日><日><日><日><日><日><日><日><<0</td>8/27

Algorithm

- Initialization (initial T-spline zero-level set and particles, pre-computation of the unsigned distance field function).
- Evolution of the implicitly defined surface (one time step).

< ロ > < 同 >

かへで 9/27

- Projection of the particles.
- Local resampling of the particles if necessary.
- Final refinement.

- 2 Particle sampling
- 3 Range constraint
- 4 Volume constraint
- **5** Example and Conclusion

Particles: Requirements and goals

- We need sample points along the zero level-set.
- Sample should be dense enough (close to uniform).

4 D b

うへで 11/27

- Sample points should be fast to compute.
- Local resampling.
- Correct topology.

Particle sampling

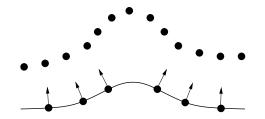

Marching triangulation (Hartmann '98).

- Needs information on normals (provided by the implicit surface)
- Can be done locally or globally
- Distance between neighbouring sample points in the initial particle set $\approx \rho$
- ρ is a user defined constant called "feature-size".

Criteria for resampling

Distance between neighbouring sample points

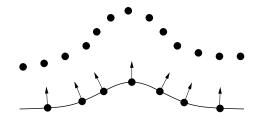

$$|\mathbf{x}_i - \mathbf{x}_j| > 2\,\rho$$

Criteria for resampling

Distance between neighbouring sample points

$$|\mathbf{x}_i - \mathbf{x}_j| > 2\,\rho$$

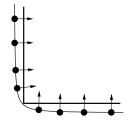

<ロ> < 回> < 回> < 三> < 三> < 三> 三 のへで 13/27

Criteria for resampling

Normals of neighbouring sample points

 $\mathbf{n}_i \cdot \mathbf{n}_j < \epsilon$

 \mathbf{n}_i is the normal of f at \mathbf{x}_i

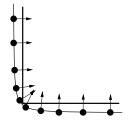

Criteria for resampling

Normals of neighbouring sample points

 $\mathbf{n}_i \cdot \mathbf{n}_j < \epsilon$

 \mathbf{n}_i is the normal of f at \mathbf{x}_i

- 2 Particle sampling
- 3 Range constraint
- 4 Volume constraint
- **5** Example and Conclusion

<ロ> < 四> < 回> < 言> < 言> < 言> こ のへで 15/27

- T-spline ensures that $f(\mathbf{x}, \tau) \leq 0$ for \mathbf{x} inside $\Gamma(f, \tau)$.
- Define a constraint that forces a region A to lie inside or outside of the zero level-set.

•
$$f(\mathbf{x}_i) \le 0 \quad \mathbf{x}_i \in A$$

<ロ> < 聞> < 言> < 言> < 言> こ 16/27

Least-squares problem

Example 2

<ロ> < 回> < 回> < 言> < 言> < 言> こ 19/27

- 2 Particle sampling
- 3 Range constraint
- 4 Volume constraint
- **5** Example and Conclusion

Volume constraint

- \bullet Specify a volume function $V(\tau)$
- $\bullet\,$ Control the volume change $\dot{V}(\tau)$ during the evolution

୬ ବ (୦ 21 / 27

• Volume preservation $\dot{V}(\tau)=0$

Formulation as linear constraint

$$\int_{\mathbf{x}\in\Gamma} \left(\underbrace{\operatorname{actual normal}}_{\mathsf{velocity at } \mathbf{x}}\right) dA = \dot{V}$$

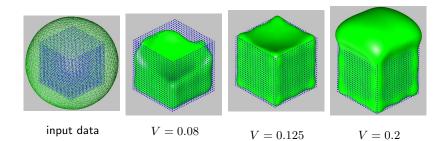

where

$$* = -\frac{\dot{f}}{|\nabla f|} = \sum_{i=1}^{n} (\ldots) \dot{c}_i$$

Use Lagrangian multipliers to add the constraint to the evolution.

<ロ><一><一</td>< 言>< 言>< 言>< 言</td>のへや25/27

Summary and conclusion

- Combination of the evolution of implicitly defined surfaces and point set surfaces.
- Strategies for resampling the point set surface.
- Range and volume constraints to represent a-priori knowledge

Thanks for your attention!
